COVER LETTER

Application for a Position in Data Analytics, Reporting, and Business Intelligence

Dear Hiring Manager,

As a Junior Data Analyst, I combine a technical university degree and extensive experience in logistics, inventory management, and process coordination with a successfully completed 800-hour Data Analytics & Engineering program. This combination enables me to quickly understand operational processes and translate data into reliable decision support.

During the program, I worked hands-on with SQL and Google BigQuery, Python, Tableau, statistics, and machine learning. In my capstone project, ShopSphere, I analyzed 12,274 e-commerce orders, developed interactive KPI dashboards, and evaluated an A/B test covering 7,355 orders. Based on the findings, I developed actionable recommendations for customer retention, marketing, assortment management, and checkout optimization. The full project is documented in my [GitHub portfolio](#) and [Tableau Public](#).

My years of experience in warehouse management, logistics, and technical procurement have given me a strong understanding of data quality, inventory accuracy, supply processes, and reliable reporting. I am used to checking information carefully, coordinating workflows, and taking responsibility for accurate product and documentation processes.

I work independently, in a structured and solution-oriented manner, take feedback constructively, and communicate results clearly to different audiences. My German is at B1 level, and I continue to strengthen my language skills in a professional context. I am available to start at short notice.

I would be pleased to support your company with data analysis and preparation, the development of reliable reports and dashboards, and the identification of concrete optimization opportunities. I would welcome the opportunity to discuss my background and motivation in an interview.

Kind regards,

Dmytro Starodub
