MOTIVATION LETTER

My Path into Data Analytics

Dear Hiring Manager,

My transition into Data Analytics is a deliberate continuation of my previous professional experience. Over more than a decade in technical procurement, warehouse management, and logistics, I saw every day how strongly sound decisions depend on complete inventory data, clear metrics, and reliable processes. Over time, I became increasingly interested not only in what happens within a process, but also why it happens and how data can reveal opportunities for improvement.

My technical education in automated control systems and information technologies for design provides a solid foundation for this transition. To combine my operational experience with modern analytical methods, I successfully completed the 800-hour Data Analytics & Engineering program at Deutsche Tech Akademie. There, I deepened my knowledge of SQL, BigQuery, Python, Tableau, statistics, A/B testing, machine learning, data modeling, and modern AI tools.

Practical application was especially important to me. In my ShopSphere capstone project, I worked through the full analytical cycle expected of a Junior Data Analyst: from data validation and cleaning to defining business questions, writing SQL queries, creating visualizations, evaluating results statistically, and developing concrete recommendations. Analyzing 12,274 orders and an A/B test showed me how raw data can be turned into clear, actionable decisions.

I bring accuracy, a strong sense of responsibility, and a well-developed understanding of operational processes. At the same time, I enjoy learning new technologies, approaching questions systematically, and communicating results clearly. I continue to develop my German based on my B1 level and through ongoing professional use.

My goal is to take responsibility in an entry-level role in Data Analytics, Reporting, or Business Intelligence and help organizations maintain data quality, identify developments at an early stage, and improve processes in a transparent and measurable way. I also want to bring my experience in logistics and e-commerce as a practical advantage while continuing to grow professionally as a Data Analyst.

Kind regards,

Dmytro Starodub
